

BNY Mellon

The instructions on this page are intended for you to review HackerRank's Desktop App, their most advanced test security measure.

What is the Desktop App?

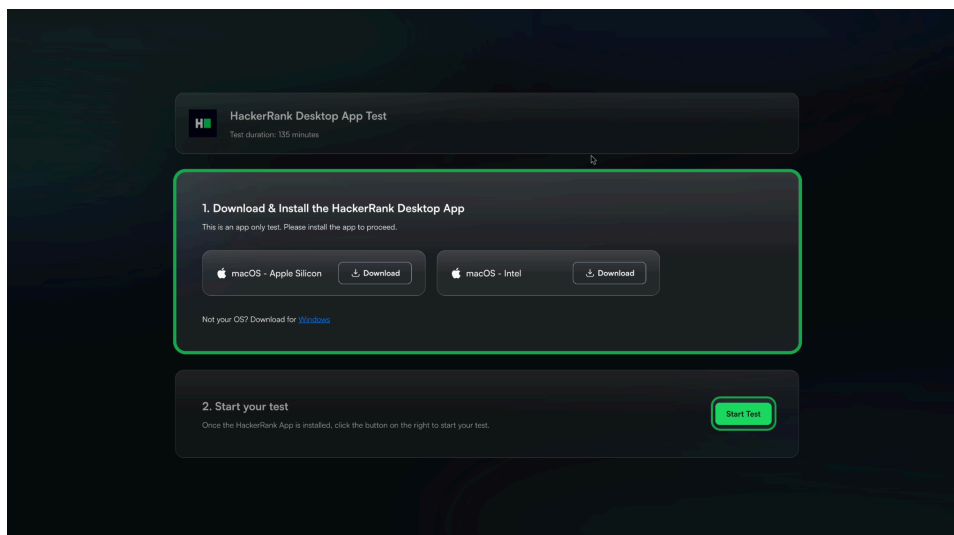

The HackerRank Desktop App is a secure, dedicated application that candidates download to take proctored technical assessments in a controlled environment. Unlike a standard browser session, the desktop app enables stronger security measures such as browser lockdown, restricted system access, and enhanced monitoring capabilities to help protect assessment integrity. It is designed to reduce opportunities for cheating, block unauthorized resources, and provide employers with greater confidence in candidate performance.

Desktop App Installation

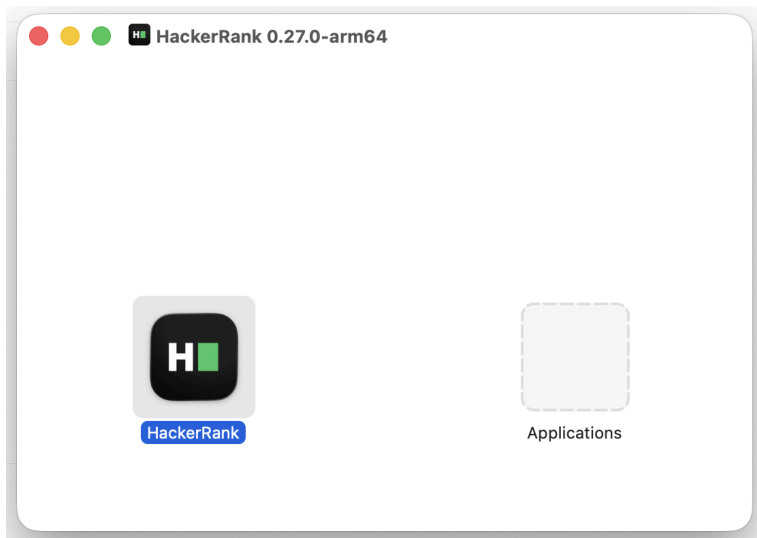

Step 1: Click this link to download the HackerRank Desktop App.

Link to Download : <https://www.hackerrank.com/app>

Step 2: Download the Desktop App on your computer.

Step 3: Drag and drop the "HackerRank" App into your Applications folder.

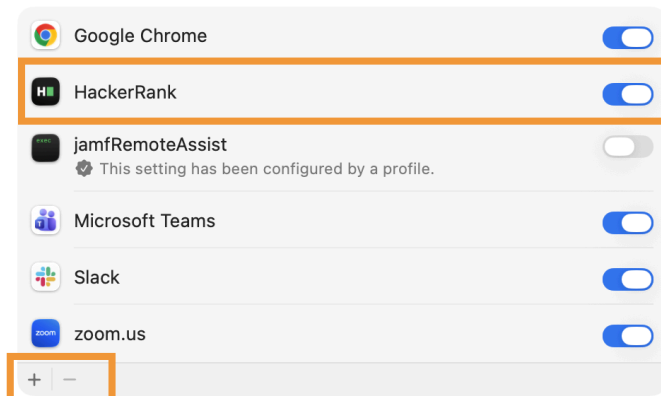

Step 4: Grant system permissions, by clicking “Open Settings”.

Step 5: Enable HackerRank for each setting.

Please note: If you do not see the HackerRank App, click the + icon to add it. Then, enable.

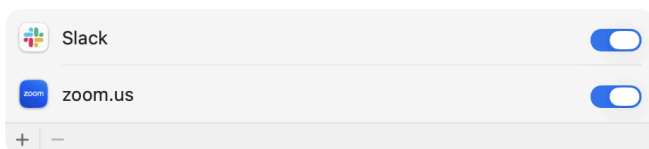

Screen & System Audio Recording

Allow the applications below to record the content of your screen and audio, even while using other applications.

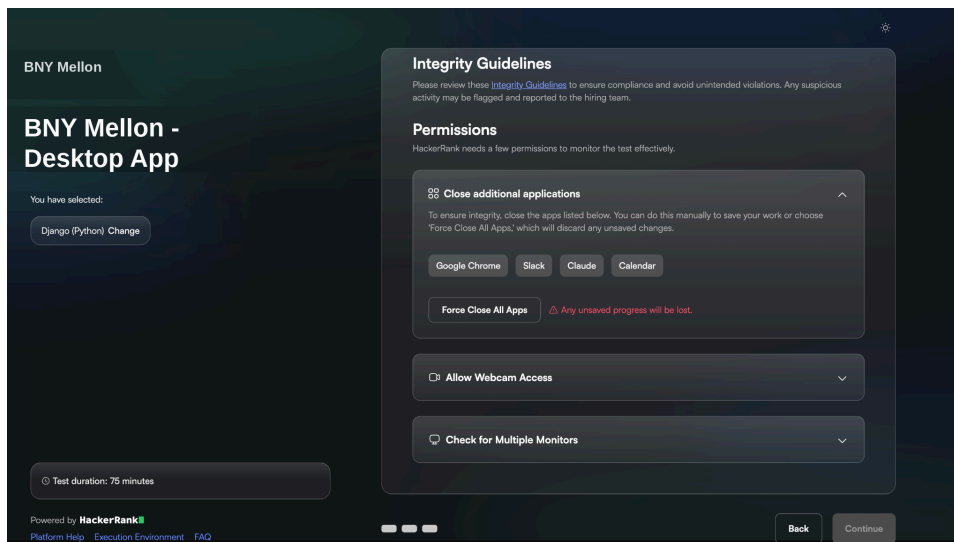

System Audio Recording Only

Allow the applications below to access and record your system audio.

Step 6: Continue through the pre-test flow and grant the required permissions. You will have to close all external applications.

Step 7: Once the test is launched, try to launch any application: Zoom, Teams, Chrome, QuickAssist tools, etc. Confirm that the desktop app blocks these applications from launching.

You have completed the installation for the Desktop App.

Best Practices for Running Group Assessments in HackerRank Desktop App Mode

Here are a few best practices for running group assessments in HackerRank Desktop App Mode, where multiple candidates take the assessment simultaneously at a shared physical location. Following these guidelines helps ensure a smooth, stable, and fair assessment experience for all candidates.

1. Supported operating systems

Operating System	Supported Versions
Windows	10 and 11
macOS	Monterey 12 or above (compatible with both Intel-based and Apple Silicon-based Macs)

2. Ensure a stable internet connection

A reliable internet connection is critical when multiple candidates take an assessment simultaneously.

- Minimum bandwidth: 5 Mbps per candidate
- Recommended bandwidth: 10 Mbps per candidate for optimal performance

Use the following formula to calculate the required bandwidth based on the number of candidates to avoid network congestion.

$$5 \text{ Mbps} \times (\text{number of candidates} \div 2)$$

For example, if 100 candidates connect simultaneously, the required bandwidth is:

$$5 \text{ Mbps} \times (100 \div 2) = 250 \text{ Mbps}$$

Note: Avoid using VPNs, proxies, or restricted corporate networks. These networks can interfere with test connectivity.

3. Set up webcams

Prepare webcams before the assessment starts to meet HackerRank Desktop App Mode requirements.

- Use a functioning built-in or external webcam
- Test the webcam in advance
- Uninstall or disable any virtual camera software to prevent conflicts

4. Set up lighting

Proper lighting ensures clear webcam visibility throughout the assessment.

- Seat candidates in a well-lit area
- Ensure the candidate's face is clearly visible at all times
- Avoid strong backlighting, such as bright windows or light sources behind the candidate

5. Complete pre-test setup

Complete the following steps before the assessment begins:

1. Install the HackerRank Desktop App on all systems you plan to use for the assessment at least 30 minutes before the test.
2. Enable the following system permissions:
 - Windows: Camera access
 - macOS: Webcam and system events access
 - macOS: Accessibility access

3. Disconnect all external monitors. HackerRank Desktop App Mode supports only a single display during the test.

4. Close all other applications before launching the HackerRank Desktop App.

Note:

- Ask candidates to take a sample test to familiarize themselves with the environment. The sample test link appears in the test invitation email or instructions.
- If candidates take the test using a laptop, connect it to a power source to prevent interruptions.

6. Troubleshooting

If the test window appears blank or unresponsive, ask candidates to refresh the screen:

- Mac: Command (⌘) + R
- Windows: Ctrl + R
